Safend Data Protection Suite 3.6.1

Supported Burning Formats

General

Safend Protector allows administrators to define security policies that restrict and monitor CD/DVD burning operations. This feature is applicable when using burning formats which are supported by Safend Protector.

CD/DVD burning operations using unsupported formats will be blocked in the following scenarios:

- The security policy blocks unsupported burning formats (defined in storage control -> CD/DVD permissions).
- The security policy enforces CD/DVD encryption.

Supported Burning Formats

The following are the burning applications and configurations supported by Safend Protector. All supported formats are tested in Safend's Quality Assurance lab. Non default application settings are marked in red.

Other burning applications using ISO/UDF formats may also be compatible; however, these formats have not been fully tested in our Quality Assurance lab.

Windows Burner (Vista and above)

CD Burning is supported using the following settings:

Mastered burning format. (Defined in "**burn a disk**" dialog -> **show formatting options** -> **Mastered**).

DVD Burning – not supported.

Nero

First CD/DVD burning operation to the same media– fully supported using all burning formats.

Additional CD/DVD burning operations to a rewritable media – supported when using the following settings:

- No multisession (defined in **Nero Burning Rom > burn > burn compilation > multisession**).
- Track at once (defined in **Nero Burning Rom > burn > burn compilation > burn > write method**).

Roxio Easy CD Creator 7

First CD burning operation to the same media– fully supported using all burning formats.

Additional CD burning operations to a rewritable media – supported when using the following settings:

- Read only disk (defined in **burn** > **burn progress** > **record methods** section).

DVD Burning – not supported.

Note: When burning a Safend Encrypted Volume do not use ISO-9660 burning format since this format does not support long file names.

ROXIO EASY CD CREATOR 8

First CD/DVD burning operation to the same media– fully supported using all burning formats.

Additional CD/DVD burning operations to a rewritable media – supported when using the following settings:

- One recording (defined in tools -> options -> write ones compatibility).
- Disk at once (defined in tools -> options -> recording options).

Note: Burning CD\DVD with Easy CD Creator 8, using a combined ISO + Joliet + UDF format is not supported.
