General Information

In this document we will describe the Patch Updater functionality.

Server or Console patch are provided inside Safend signed self-contained package, it contains **Server.zip**, **Console.zip** and **manifest.id**.

The **Updater.exe** requires to be run with elevated permissions.

It can run from a network share or locally on the server, it is recommended to run the **Updater.exe** from the command line.

Once the **Updater.exe** is running, verification condition check that the Patch Updater version match to the Safend installed version if the version doesn't match, execution will be stopped without any change to the system.

Once verification is completed, Safend services will be turned off, backups will be created:

\Program Files\Safend\Safend Data Protection\bin_YYYYMMDD_HHMM

\Program Files\Safend\Safend Data Protection\consoleUpdater\console_YYYYMMDD_HHMM

\Program Files\Safend\Safend Data Protection\consoleUpdater\manifests_YYYYMMMDD_HHMM

Note: Backups will not be removed unless deleted manually, including after uninstall process.

Once the update is completed, services will be turned on again.

Run Patch Updater

1. Download the **Updater.exe**
2. Login into the Server the Safend Management Server is installed on
3. Run the **Updater.exe**

Rollback

To roll back to the previous version:

1. Stop the **Safend services**
    a. **Safend Data Protection Local Service**
