Email Security, Anti-Spam & Content Control

Policy Patrol Mail Security addresses the pain points of email use: spam, phishing, malware, large attachments, inappropriate use, a need for consistent & professional email signatures and disclaimers, mail backup requirements, content security, confidentiality concerns, reputation & brand protection, and prevention of legal issues involving email. Policy Patrol is easy to install and configure, and its powerful policy wizard allows you to create customized user-based policies by specifying conditions, exceptions and actions. Policy Patrol is at work in the smallest offices and in the largest corporations, filtering emails for millions of users worldwide.

Policy Patrol
Mail Security 10

Threat Protection | Ensure Compliance | Increase Productivity | Reduce Liability

What our customers say:

'With tools like message filtering, message duplication, disclaimers, and reporting, Policy Patrol makes the task of being compliant much easier.'

Karl Kail - Director of IT, Royale Energy Inc. (San Diego, California)

System requirements

- **Windows 2003/2008/2012 Server**
- **Exchange Server 2003/2007/2010/2013, Lotus Notes/Domino or other mail server.**
- **Microsoft .NET Framework**

Immediate Spam & Phishing Relief

Policy Patrol Mail Security ships with a default configuration that will start blocking spam within seconds after installation and empowers users to manage their own spam. With the daily quarantine report, users will never miss a legitimate email again. Users can quickly skim through the list of newly quarantined messages from within Outlook and deliver emails or add addresses to the allow list.

Advanced Threat Detection and Prevention

Block dangerous attachment types and use OPSWAT's Metascan to scan email attachments for malware. With the Metascan add-on, email attachments can be scanned with multiple (between 4 and 40) anti-malware engines at once, significantly increasing the virus detection rate while maintaining fast scanning performance. Metascan can also perform file sanitization and file type checking, preventing zero-day and targeted attacks.

Protect Confidential Data

By content checking emails & attachments, you can prevent confidential data from leaving your organization. Policy Patrol can for instance detect and block emails containing credit card and social security number sequences.

Disclaimers, Signatures & Branding

Add the right language to the right emails—automatically. Policy Patrol Mail Security offers user-based and condition-based email signatures & disclaimers with logos and Active Directory merge fields.

Block Illegal or Offensive Emails

Protect your company from libel and other lawsuits by checking emails before they are sent out. Automatically block emails with offensive or illegal words and send a message report of intercepted emails to managers for review.

Email Backup

Need a backup of your emails? Want to recover a deleted email? Policy Patrol offers email archiving to a Microsoft SQL Server database and allows you to retrieve and restore messages to your mailbox.

Ensure a Safe Work Environment

Let Policy Patrol protect your employees by screening emails for inappropriate or discriminatory content. Although most email filters only check external mails, Policy Patrol can also content check internal emails, which are frequently the culprit in unsafe work environment lawsuits.

Monitor Email Policy Violations

View reports on which users breached which email policies and when. Configure policies to automatically notify employees and managers when breaches occur and optionally place employees on a warning list.

Email Management

Policy Patrol can also help you simplify otherwise manual tasks, such as compressing attachments, changing From:/Reply to: address, sending a blind copy, and more.
