What's New in Policy Patrol 10?

Policy Patrol 10 offers increased protection from email security risks, as well as an improved user interface and new dashboard.

New features in version 10:

New Real-Time Phishing Block List

Block more phishing emails with the real-time phishing block list that maintains IP addresses of known phishers.

Improved Handling of Spoofed Emails with DMARC

Policy Patrol can now implement a company's DMARC policies when detecting spoofed emails and help reduce the potential for email-based abuse.

Metascan Online Multi Anti Virus Scanning (free edition)

Scan your email attachments with multiple anti-malware engines to ensure the highest malware detection rate. Request your free Metascan Online subscription for scanning up to the free edition scan limits. Licenses for increased scan limits are available for purchase. Metascan on-premise is also available as a multi anti-malware scanner for Policy Patrol Mail Security.

New Dashboard with Instant Overview of Threats Detected

The new Policy Patrol dashboard provides information on the number of emails processed, number of threats blocked, email policies applied, email signatures added and more.

Audit Logs Now Accessible From Console

Audit logging, now included in the Logs node > Audit, shows which users delivered or deleted which messages from the Quarantine folders and which users added email addresses to the allow list and block list.

New Test Email Feature for Email Signatures

Policy Patrol 10 now includes the option to send a test email to preview your email signature template before you deploy it to your users. To use this feature, click on the Test Email button in the Email Signature Template.

Improved User Interface

The Policy Patrol 10 user interface has now grouped Anti-Spam, Anti-Phishing and Anti-Malware in one ‘Email Threat Protection’ node for easier configuration and overview of the different threat protection options.

Policy Patrol Mail Security 10 users free!
