SecurEnvoy SecurAccess Quick Start Guide

Preparation

1 Supported Server OS

Windows 2003/08/12 R2

1.1 Install IIS

1.2 For direct user management, make sure that a designated account has been setup for read and write access to Active Directory or other supported LDAP servers

1.3 For remote admin, make sure a SSL certificate is installed

1.4 For Radius authentication, make sure port 1812 is available.

Installation

2 Install Security Server

2.1 Install the security server

2.2 Complete the advanced config utility

2.3 Launch the Admin GUI

2.4 Enable a user and setup for One Time or Day Code Passcodes

2.5 Check to see if code received

Integration

3 Select Authentication Method

- A Radius, VPN or other Radius client
- B IIS Web Agent, Citrix OWA etc…
- C Integrated Desktop Management

A Radius Configuration

A.1 Launch Admin GUI, select Radius

A.2 Enter IP address of Radius device (SSL VPN)

A.3 Enter Pre-Shared secret

A.4 Set up Radius device with timeout set to at least 10 seconds

A.5 Carry out test authentication

Check for Integration Guide at:

http://www.securenvoy.com/integrationguides

B IIS Web Agent

B.1 Install IIS Web agent on designated web server

B.2 Launch IIS MMC

B.3 Select Web site properties, select SecurEnvoy tab and enable authentication.

B.4 Select virtual directory properties select SecurEnvoy tab and enable authentication

Check for Integration Guide at:

http://www.securenvoy.com/integrationguides

C Integrated Desktop Management

C.1 Start the SecurEnvoy Admin GUI and select "config"

C.2 Select SecurEnvoy as the PIN

C.3 Select PIN setting that contains the relevant number of Upper and lower to match the Microsoft password policy

C.4 Select "Pin & Code Synchronized To User's Password"

NOTE: Enable Off-line Agent if laptops are not always connected to the network.

C.5 Select "Local Users"

C.6 Search for a user that requires the Integrated Desktop Management feature

C.7 Create a Pin for them or allow them to create there own (User Create)

C.8 Enable them and select "Day Code"

NOTE: that One Time Passcodes are not supported in this mode

The end user will be sent a 6 digit passcode. Their Microsoft password is now a combination of the PIN and Passcode.

For users that have a laptop that uses off-line domain password see the Offline Agent Installation guide.
