SecurEnvoy SecurPassword Quick Start Guide

Preparation

1 **Supported Server OS**

Windows 2003
Windows 2003/08/12 R2

1.1 Install IIS

1.2 Make sure that a designated account has been setup for read, write and reset password access to the Active Directory

1.3 Make sure a web certificate is installed in IIS

Installation

2 **Install Security Server**

2.1 Install the security server

2.2 Complete the advanced config utility

2.3 Launch the Admin GUI

2.4 Enable a user and setup for One Time Passcodes

2.5 Check to see if code received

Security Considerations

3 **SecurPassword Reset Methods**

3.1 Start the GUI and select Config
Select "Allow SecurPassword"

3.2 You can use secret questions or existing data already stored in our LDAP server.

Secret questions can be enabled by selecting "Secret Questions" in the SecurPassword section.

When a new user is created their first SMS message will take them to an enrolment page to enter two answers to secret questions.

OR

Use existing LDAP data can be used by un-selecting "Secret Questions" and entering up to two prompts and LDAP attribute names that contain strings to match.

3.3 Carryout a password reset via a secure Web page. https://*servername*/password

OR

3.4 Install the Windows Login Agent located in the Agents\Windows Login Agent directory of this installation package. Refer to Agents\Windows Login Agent.pdf for instructions
